Storage Box Build Instructions

Please ensure that you build the storage box on a flat, hard and stable surface.

It is possible for one person to build the storage box, but a 2nd helper to hold panels whilst in construction would make the job much easier.

As you are building the storage box, do not tighten the screws fully until the end, Make sure that you do not over tighten screws. Make sure that all panels are square and at 90 degrees where appropriate and that the storage box is level before tightening all the screws.

1. Attach the adjustable feet to the bottom of the side panels
2. Attach the back panel of the storage box to the side panels using the pre drilled holes to site the screws
3. Lay the doors flat on the ground and attach the door handles
4. Attach the front panel to the side panels using the pre drilled holes to site the screws
5. Attach the hinged top lid to the top of the back panel
6. Insert the base and shelves and tighten all screws making sure that the storage box is level and all panels are square and at 90 degrees where appropriate
